## Boomerang Refresh

### Updates

#### **1. Prospect Client:**

Perhaps most of you have already noticed that we have a new area in Boomerang called Prospect Client.

It is important to inform that, from now on, the entire customer will be introduced to Boomerang by the prospect client area, and they will be able to switch to a common customer or not.

This will help the company's top management to follow more closely what is happening with the development of new customers.

These customers may not be used on any work order. To use it at WO, they need to be a customer already.

#### **2. Operational Dashboard:**

Some of the Operational graphics were defined and will be already available for the operational team.

## Next Steps

Our IT team is working in develop the Purchase Order area, which will make easier to request the Consumables and the General Material.

The first step for this will be the development for the Supplier setup and it will be online on 13<sup>th</sup> April.

If you have any further question, don't hesitate to creating a new ticket in Boomerang for the Finance team.
